

E-BULLETIN OCTOBER 2020 **43.00-1**

DeZURIK BAW AWWA BUTTERFLY VALVES

Defining the DeZURIK Difference

DeZURIK History

DeZURIK is an innovative global leader for the water and wastewater treatment industries, recognized worldwide for high quality and superior performance.

While DeZURIK provides innovative valves and related equipment for water and wastewater, DeZURIK eagerly responds as new industries develop and existing industries progress. Our knowledgeable engineers are quick to respond with groundbreaking technological advances. They continue to develop a wide range of products focusing on water and wastewater treatment, pulp and paper, chemical and petrochemical, power, mining and other process industries. Some of our products increase accuracy. Others assure durability or reliability. All of our products work to enhance our customer's profitability.

Certification

For our latest certifications, please visit our web site www.dezurik.com.

Leading Edge Design Software

Computer Aided Design systems are used by research and development engineers throughout the product development cycle. DeZURIK utilizes leading edge solid modeling software which allows product designers to view valve parts and assemblies three dimensionally. The 3D models are electronically transferred to Finite Element Analysis software where stress and deflection calculations are performed. This software allows designers to visualize deflection of critical parts under extreme loads. Proper relief and safety factors are included in every valve design to ensure long performance life.

Advanced Machining Capabilities

DeZURIK's solid modeling CAD software allows parts to be directly transferred to CAM modules for machine fixture design and NC programming. AWWA Butterfly Valves are manufactured with the most sophisticated machining centers available. Milling, drilling, boring, and tapping operations are performed on fully automated machine centers that perform sequential, error-free operations. DeZURIK's investment in state-of-the-art machining centers ensures products of consistently high quality.

Rubber & Elastomer Compounding

DeZURIK formulates and handcrafts rubber to control quality on critical components. Over 50 years of pressure/temperature rubber-molding experience assures the AWWA seat design provides long, maintenance-free service. DeZURIK compounds its own resilient seat materials to assure low operating torque and protection from pipeline corrosion and abrasion from sedimentation deposits.

Prototype Design Testing

Valve prototypes of sizes up to 36" (900mm) are tested in DeZURIK's flow laboratory. Flow ranges from a few cubic centimeters per minute to 72,000 gallons per minute can be tested. Computer controlled testing automatically sets flow, monitors temperatures, takes sample readings, and analyzes information. Before release, beta test sites are used to gain actual field experience. Valves are tested up to 10,000 cycles per AWWA C504 specifications. Proof of design testing certification is available.

Applications

DeZURIK AWWA Butterfly Valves are designed for applications throughout water and wastewater treatment plants, water distribution systems, power plants, and industrial plants. AWWA Butterfly Valves can be applied in applications demanding high-quality and thoroughly tested valves which offer many years of trouble-free service.

Pump Check Control Systems

Pump check control systems, utilizing AWWA Butterfly Valves, are available in many different models.

Production Testing

Each valve is given a hydrostatic, seat leakage and performance test per AWWA C504 before it is shipped.

Features for Years of Trouble-Free Service

Body Styles

Flanged, ASME B16.1 Class 125, 3–20" (80–500mm), Valve Class 150B

Flanged, ASME B16.1 Class 125, 3–20" (80–500mm), Valve Class 250B

Flanged, ASME B16.1 Class 250, 3–18" (80mm–450mm), Valve Class 250B

Mechanical Joint, ANSI/AWWA C111/A21.11, 4–20" (100–500mm), Valve Class 150B

Mechanical Joint, ANSI/AWWA C111/A21.11, 4–20" (100–500mm), Valve Class 250B

Corrosion Resistant Shaft

Stainless steel shafts provide corrosion resistance in bearing and packing journal areas to ensure long bearing and packing life. Standard shaft materials include 304, 316, and 17-4 PH stainless steel.

Self-Compensating Shaft Seals

Shaft seals are self-compensating, V-type packing. DeZURIK uses a minimum of four sealing rings. This proven multi-ring sealing technology offers reliability and continuous self-adjustment.

Long Life, Low Friction Bearings

Upper and lower journal shaft bearings are designed to provide high compressive strength, low friction and require no lubrication.

Fully Rubber Lined Body

A fully rubber lined body is standard, eliminating the need for inner body coating, and protecting the body against corrosion buildup.

Integrity of the Proven Molding Process

The rubber bonding process used on DeZURIK AWWA Butterfly Valves is proven by more than 50 years of field experience. AWWA C504 requires testing of the bonding process per ASTM D429, method B. The test requires a 1" (25mm) wide strip of rubber to withstand a minimum 75 lbs. pull force (at a 90° angle) before tearing away from the valve body. During destructive testing, the rubber must tear before the bond between the rubber seat and metal valve body gives way, demonstrating that the bond is stronger than the rubber. Based on extensive experience and proof of design testing, DeZURIK can assure that a molded-in body seat remains maintenance-free for the life of the valve.

Choice of Seat Materials

Standard seat materials include Acrylonitrile-Butadiene (NBR) for water service and EPDM for high-temperature applications such as air blower lines.

4° Sealing Surface

The spherical sealing surface, molded into the valve seat, provides constant interference between the sealing surface and the disc edge for a full 4° sealing range. This allows the actuator to be adjusted within the correct sealing range while the valve is under pressure and flow.

Molded-In Body Seat

The pressure/temperature molding process used on AWWA Butterfly Valves provides a long-lasting, maintenance-free seat. DeZURIK's molded-in body seat lasts far beyond the 10,000 cycles required by AWWA C504. The molded seat-in-body design provides:

- Uniform rubber thickness.
- Consistent interference between the rubber seating surfaces and the stainless steel disc edge.
- Tight tolerance control on critical seat dimensions.

Disc Locators

An innovative, molded-in, disc-centering device aligns the disc in the seat, providing a positive seal and longer seat life. Disc hubs, supported by the locators, ensure disc location accuracy. The offset style disc design means disc-alignment locators are separate from the sealing surface, extending valve seat life.

Proven Disc-To-Shaft Pinning

All DeZURIK disc-toshaft pinning connections conform to AWWA C504. Disc-to-shaft pinning is provided by a stainless steel torque screw on sizes 3–12" (80–300mm). Sizes 14–20" (350–500mm) utilize a tangential pin which is locked in place with a stainless steel set screw.

High Temperature Applications

For operating temperatures to 290° F (143°C), EPDM seat material and packing, high temperature bearings and high temperature paint on the disc are available as standard options. Other seat materials for higher temperatures available on application.

Integral Shaft Bearing Seals

To ensure all components of the valve remain maintenance-free, the molded-in body seat and body liner contain integral shaft bearing seals in the upper and lower journals. These seals protect bearing journal areas against sedimentation, mineral deposits, and corrosion particles — all of which can damage bearings and shorten valve life.

Seat-In-Body vs. Seat-On-Disc

DeZURIK's AWWA Butterfly began its evolution over 40 years ago. For over 25 years, a stationary rubber seat located in the valve body has been the standard. This feature is fundamental to the long-term performance of the valve.

After years of service, water distribution valves and pipelines (regardless of material) suffer the effects of abrasive corrosion and tuberculation buildup. When the rubber seat of a butterfly valve is located on the moving disc edge, it will erode or tear away as it plows its way through line buildup, causing the valve to leak. With a rubber seat-in-body design, the stainless steel disc provides the resistance necessary to plow through line buildup without seat-on-disc edge damage.

Offset Disc Design

The offset disc provides an uninterrupted 360° sealing surface. The sealing surface is not interrupted by the valve shaft and does not have any continuous contact points between the rubber seat and the disc edge. This results in a longer seat life.

Stainless Steel Disc Edge

Solid 316 stainless steel disc edge provides the corrosion and abrasion resistance essential for long-lasting, maintenance-free service. The stainless steel disc edge is on all disc materials including iron, carbon steel and aluminum bronze discs.

24" (600mm) and Larger Design

Quality Features for Superior Performance

Mechanical Joint, ANSI/AWWA C111/A21.11, 24–48" (600–1200mm), Valve Class 250B

Corrosion Resistant Shaft Material

Standard shaft materials include 304, 316, and 17-4 PH stainless steel, providing the corrosion resistance in the bearing and packing journal areas necessary to ensure long bearing and packing life.

Stainless Steel Disc Edge

Solid 316 stainless steel disc edges provide a corrosion and abrasion resistant seating area essential for long-lasting, maintenancefree service.

Choice of Seat Materials

Standard seat materials include Acrylonitrile Butadiene (NBR) for water service and EPDM for high temperature applications such as air blower lines.

High Temperature Applications

For operating temperatures to 290°F (143°C), EPDM seat material and packing, high temperature bearings and high temperature paint on the body and disc are standard. Other seat materials for higher temperatures available on application.

Positive Disc Locators

Incorporated into the lower shaft is an adjustable thrust bearing assembly which holds the disc position in all possible installation orientations. This thrust bearing absorbs forces from the disc weight, internal hydraulics and axial shaft loads.

Rugged Disc Structure

DeZURIK utilizes state-of-the-art design and analysis computer software and test equipment to develop the optimum disc structure. Larger valves have an open disc structure, allowing water to flow through the center ports of the disc. On smaller sizes, DeZURIK utilizes a dome disc structure. On all valve sizes the disc structure is non-hollow, allowing inspection of each surface and wall thickness against shrinkage and core shift during the casting process.

Seat Design

DeZURIK's large valve seat design is industry proven and offers reliability, low operating torque and long life. The rubber seat is retained within a dovetail groove in the valve body and locked in place by an epoxy wedge. This design eliminates the need for fasteners, retaining rings or retaining segments to lock the seat in place. After the valve is fully assembled, with the disc in the closed position, an epoxy compound is injected behind the rubber seat and cured at a predetermined pressure based on the valve's pressure class. The injection pressure controls the interference between the rubber and stainless steel disc edge, providing a level of seating performance virtually impossible to achieve with other seat designs.

Adjustable, Replaceable Seat

As required by AWWA C504 for valves 24" (600mm) and larger, this seat design offers field adjustment and replacement capabilities. Proper field adjustment can be performed from either the upstream or downstream side of a pressurized valve.

Proven Disc-To-Shaft Pinning

Disc-to-shaft pinning is provided by a stainless steel tapered pin on sizes 24" (600mm) and larger. This proven design provides a reliable, high strength connection that conforms to AWWA C504.

Long Life, Low Friction Bearings

The upper and lower journal shaft bearings are designed to provide high compressive strength, low friction and require no lubrication.

Self-Compensating Shaft Seals

Shaft seals are self-compensating, V-type packing. DeZURIK uses a minimum of four sealing rings. This proven multi-ring sealing technology offers reliability and continuous self-adjustment. Standard packing materials include Acrylonitrile-Butadiene (NBR) or EPDM to meet all application requirements.

Offset Disc Design

The offset disc provides an uninterrupted 360° sealing surface. The sealing surface is not interrupted by the valve shaft and does not have any continuous contact points between the rubber seat and the disc edge. This results in a longer seat life.

Applicable Standards

DeZURIK BAW AWV	VA Butterfly Valves are designed and/or tested to meet the following standards:		
ANSI/AWWA C111/A21.11	11/A21.11 Mechanical Joint Bell dimensions conform to ANSI/AWWA C111/A21.11, Rubber Gasket Joints for Ductile Iron and Gray Iron Pressure Pipe Fittings.		
ANSI/AWWA C-504	Valves conform to AWWA Standard ANSI/AWWA C-504 for sizes 3-72" (80-1800mm) Rubber Seated Butterfly Valves. Standard interior and exterior coatings meet the requirements of this standard.		
ANSI/AWWA C-516	Valves conform to AWWA Standard ANSI/AWWA C-516 for sizes 78" (2000mm) & larger Rubber Seated Butterfly Valves. Standard interior and exterior coatings meet the requirements of this standard.		
ASME B16.1	SME B16.1 Dimensions and drilling of flanged end connections on valves up to 96" (2400mm) conform to Class 125 sections of ASME B16.1 Cast Iron Pip Flanges and Flange Fittings.		
ASTM D429	Bonding of 3-20" (80-600mm) seats conforms to ASTM D429, Standard Test Methods for Rubber Property - Adhesion to Rigid Substrates.		
ASTM D471	Seat material volume increase is less than 2% after immersion in distilled water for 70 hours, when tested in accordance with ASTM D471, Standard Test Method for Rubber Property - Effect of Liquids.		
ASTM D1149	Ozone resistance of seat material conforms to ASTM D1149, Standard Test Method for Rubber Deterioration - Surface Ozone Cracking in a Chamber.		
AWWA C110	WA C110 Ductile-Iron and Gray-Iron Fittings, Mechanical Joint Accessories 30-48" (750-1200mm) meet this standard.		
AWWA C153	Ductile-Iron Compact Fittings, Mechanical Joint Accessories 4-24" (100-600mm) meet this standard.		
AWWA C207	For sizes 102" (2600mm) and larger, flange bolt patterns comply with AWWA C207 and flange thickness complies with AWWA C516.

36"	(900mm)	120"	(3000mm)
		144"	(3600mm)
Note:	All orders for 28"	(700mm) and lar	ger must include valve
	pipeline mounting	g position and sh	aft orientation as second
	line information.		

End Connection

Give	end con	nection	code	as fe	ollows:
------	---------	---------	------	-------	---------

- F1 = ASME 125 Flanged 3-96" (80–2400mm)
- AWWA C207 Class B & C Flanged 102-144" (2600-3600mm)
- F2 = ASME 250 Flanged 3-48" (80–1200mm)
- MJ = Mechanical Joint 4-48" (100-1200mm)
- With Mechanical Joint ends, buriable actuators are recommended.

Body Material

Give body material code as follows:

- CI = Cast Iron F1 or MJ
- CS = Carbon Steel F1, 24" & larger (600mm & larger)
- DI = Ductile Iron F1, F2, or MJ
- S2 = 316 Stainless Steel F1, 24" & larger (600mm & larger)

Packing/Seat Combination Give packing/seat material codes as follows: Packing Material NBRN = Arrylonitrile-Butadiene Self-Adjusting 3-144" (80-3600mm)

NBKN	N =	Acrylonitrile-Butadiene Self-Adjusting 3–144" (80-3600mm) -20 to 180°F (-29 to 82°C)
NBRA	A =	Acrylonitrile-Butadiene Adjustable 3–144" (80-3600mm) -20 to 180°F (-29 to 82°C)
		Do not use with buried service
EPDN	=	EPDM Self-Adjusting -20 to 290°F (-29 to 143°C)
		3–48" (80–1200mm)
EPDA		EPDM Adjustable -20 to 290ºF (-29 to 143ºC)
		3–48" (80–1200mm)
		Do not use with buried service.
TCN	=	PTFE Self-Adjusting -20 to 450°F (-29 to 232°C)
		3–144" (80–3600mm)
TCA	=	PTFE Adjustable -20 to 450°F (-29 to 232°C)
		28–144" (700–3600mm)
		Do not use with buried service.
Sea	t Ma	terial
NBR	=	Acrylonitrile-Butadiene -20 to 180°F (-29 to 82°C)
		Must use NBRN or NBRA packing.
EPDN	1 =	Terpolymer of Ethylene Propylene & a Diene
		-20 to 290°F (-29 to 143°C)
		Must use EPDA or EPDN, TCN or TCA packing.

Class AWWA C-504

Give AWWA Class code as follows: 25A 28-48" (700-1200mm) Flanged 28-144" (700-3600mm) 75B Flanged 150B 3-144" (80–3600mm) Flanged 4–48" (100–1200mm) Mechanical Joint Flanged 250B 3–144" (80-3600mm) 4–48" (100–1200mm) Mechanical Joint

Note: Pressure ratings above 150 not available with EPDM Seat on valves 24" & larger (600mm & larger).

Disc/Shaft Combination Give disc/shaft code as follows: Disc Material

- Cl = Cast Iron disc with 316 stainless steel edge (3-20" only)
- DI = Ductile Iron disc with 316 stainless steel edge
- S2 = 316 Stainless Steel
- ALB = Aluminum Bronze (3-18" only)
- CS = Carbon Steel, 24" & larger (600mm & larger)

Shaft & Pin Material

Give shaft & pin material code as follows: S1 = 304 Stainless Steel shaft

 Si
 =
 Si
 <t

Options Give options code as follows:

- AIS = Valves conform to H.R. 3547 Consolidated Appropriations Act, 2014 Section 436 DTR = DeZURIK Standard Certified Production Hydrostatic Shell and
 - Seat Test Report
- BAA = Buy American Act
- CMC = Certificate of Material Conformance TB = DeZURIK Standard Certified Hydrostatic Shell Test and Seat Leak Test, both directions

Ordering Example:

BAW,24,F1,CI,NBRN-NBR,150B,DI-S1*Actuator

Mechanical Joint Accessories

Accessories include bolts, nuts, packing and glands for both ends. Sizes 4-24" (100-600mm) meet AWWA C153. Sizes 30-48" (750-1200mm) meet AWWA C110. Order as a separate item by giving code ACC*MJ-valve size.

Manual Actuators Lever Actuators

A 10-position dial provides positive latching in open, closed and eight intermediate positions. A pointer indicates position of disc plus a notch in the handle allows use of a padlock to prevent unauthorized valve operation.

Mounting

Lever actuators can be mounted at standard or 180°. Levers are available on 3-8" (80-200mm) valve sizes.

Rotary Manual Actuators

DeZURIK offers a variety of rotary manual actuator options which are in complete compliance with AWWA C504. Manual actuators are available with handwheel, chainwheel or 2" (80mm) square nut options.

Easily Adjustable Stops

Open and closed position stops can be easily adjusted without drilling, shimming or pinning. The stops ride the input shaft and can be repositioned with a simple adjustment of the stop nut.

Rugged Designs

Manual actuators are sized to operate with a maximum input of 150 foot pounds on 2" (80mm) square operating nuts, and can be sized for 40 or 80 pound rim pull on handwheels and chainwheels. The actuators are self-locking, maintaining valve position under varying flow conditions.

Buriable and Weatherproof Construction

DeZURIK actuators feature a cast iron housing in buriable or weatherproof construction. The mechanism is totally enclosed and does not require lubrication for routine maintenance. Buried service actuators are grease filled per AWWA C504.

Valve Position Indicator

The pointer on weatherproof actuators clearly indicates the valve position marked on top of the housing. The indicator shaft is sealed to keep moisture from entering the actuator housing.

Easily Rotatable

The four keyways in the yoke make DeZURIK nut and handwheel manual actuators easy to rotate to any of four mounting positions. Chainwheel actuators can be mounted at standard and 180°.

Manual Actuators

G-Series Design

The G-Series design is available on 3–30" (80–750mm) valve sizes with a handwheel, chainwheel or 2" square nut input. The worm gear mechanism allows the G-Series actuators to provide high output torque with a torque curve matching the torque required by the valve. G-Series actuators feature a steel worm and ductile iron gear.

300 & 450 Foot Pound Input Torque

As required by AWWA C504, an input torque of 300 foot pounds against the fully adjustable open and closed position stops is standard. A 450 foot pound input capability against the stops is an option.

LA-Series Design

The LA-Series design is available on 30–72" (750–1800mm) valve sizes. The link-arm mechanism allows the LA-Series actuator to provide characterized closure which slows valve travel as the disc comes into the seat. The actuators feature high compressive strength yoke nut bearings which ensure reliable operation and increase cycle life.

High Output Torque

The LA-Series actuators feature an input torque capability of 450 foot pounds against the open and closed position stops as standard. An optional spur gear provides a 2:1 mechanical advantage while maintaining an input torque capability of 300 foot pounds against the stops. The spur gear slows closing of the valve, minimizing the possibility of water hammer.

450 Ft-Lb Input Stops

LA-Series actuators have 450 Ft-Lb input stops as standard.

LA-Series Handwheel

LA-Series Chainwheel

O

LA-Series Handwheel with Spur Gear

Nut with Spur Gear

LA-Series Chainwheel with Spur Gear

Manual Actuator Accessories

Tee Wrench

For use in actuating 2" (50mm) nut actuators. Available in 4, 5, 6, 7 or 8 foot lengths. Other lengths available on special order.

Chain — For Chainwheel Actuators

Chain for chainwheel actuators are available in zinc plated, galvanized or 304 stainless steel.

Stainless Steel Bolting

Includes stainless steel fasteners on valve and actuator.

Clockwise Rotation

Clockwise rotation to open (open right). Available with GS/GB-6B-Series and LA Series Manual Actuators.

Galvanized Chainwheel and Guide

Same as chainwheel actuator except chainwheel and guide are galvanized.

Dial Indicating Floorstand

For valves with handwheel actuators. Actuator is mounted on the valve and the input shaft is extended to the floorstand. Included with the floorstand are the handwheel mounted on the floorstand, dial indicator and couplings. Extension rod must be ordered separately. Floorstand may be directly above valve or offset from valve location. A buried actuator must be specified when ordering an FSDI.

Extension Rod

Extension rod is required for use with FSDI floorstand.

Actuator Mounted on Floorstand

Included with floorstand are the couplings, extension pipe and mounting of actuator on floorstand.

Neck Extensions

Included is an extended valve neck and shaft. Valves for use with neck extensions must be furnished with non-adjustable packing and a non-buried actuator. Extensions are not recommended for use with positioners.

Extended Nut for Manual Actuators

For actuators used with floorboxes and valve boxes. Includes couplings, extension rod and extended 2" (50mm) square nut.

Valve Box and Valve Box Extensions

For use with buried actuators. Includes valve box and cover. One to five extension pieces may be ordered to extend depth of valve box. Valve boxes may be used with valves having standard or extended nut actuators. Top of nut must be 6" (150mm) below grade. Valve boxes are tee wrench actuated. Tee wrenches must be ordered separately.

Cylinder Actuators

DeZURIK cylinder actuators are available as doubleacting pneumatic or water hydraulic cylinders for either on-off or positioning services.

All cylinder actuators are double-acting, stationary mounted with all working parts totally protected within weatherproof enclosures.

C540 Cylinder Actuators

DeZURIK C540 pneumatic and hydraulic cylinder construction is in strict accordance with AWWA C540. The cylinder head and end cap are ductile iron. On pneumatic cylinders, interior surfaces are epoxy coated; on hydraulic cylinders, interior surfaces are nickel plated.

On pneumatic cylinders, the piston is epoxy coated cast iron and the piston rod is chrome plated carbon steel.

On hydraulic cylinders, the piston is nickel plated cast iron and the piston rod is chrome plated stainless steel.

Manual and Throttling Manual Override

Contact Application Engineering for assistance.

Mounting

Cylinder actuators can be mounted at 90° increments from standard.

Electric Motors

Electric motors offer reliable and economical valve operation. The electric actuator and associated gearing meet AWWA C540. DeZURIK AWWA Butterfly Valves can be furnished with electric motor actuators produced by leading manufacturers.

When ordering electric motor actuators, please provide information listed on "Data Input Checklist" at end of bulletin.

Water Hydraulic — Standard

Cylinder Actuator Accessories

Positioners

DeZURIK offers both pneumatic and electronic signal valve positioners for use with cylinder actuators.

Gauges

Pneumatic positioners are available with three gauges mounted and piped; electronic positioners are available with two gauges mounted and piped.

4-Way Solenoid Valves

For cylinder actuators, 4-way direct acting, two position solenoid valves feature metal enclosures, .25" (6mm) NPT connections, Cv of .70 and a maximum pressure differential of 125 psi (8.5 Bar). Solenoid coil voltage is both 110/50/1 and 120/60/1 AC power. Contact Sartell Valves, Inc. for DC voltage. Solenoids are available with or without manual overrides. On large valves, furnish valve/actuator size, service conditions, and required operating speed for recommendations. Solenoid action should be specified.

Air Filter Regulator

For use on all pneumatic actuators. Includes a pressure reducing valve with filter and gauge. Maximum supply is 100 psi (7 Bar).

Speed Control Valves

Speed control valves are available for controlling opening and closing speed on cylinder actuators.

Position Indicating Switches

Available in NEMA 4, 4x, 7 or 9 ratings. Switches are available as two SPDT or four SPDT.

Floorstand

For valves with cylinder actuators mounted on floorstand. Included with the floorstand are couplings, the extension pipe and mounting of the actuator on the floorstand.

Neck Extension

For 3–20" (80–500mm) valves using T-Series Cylinder actuators. Included is the extended valve neck and shaft with actuator mounted.

DeZURIK Butterfly Valve Applications Data Input Checklist

Part A: Check boxes and complete lines to show upstream/downstream configuration, enter distances in pipe diameters.

	rt B: Check off or enter operating conditions.
	Valve Function? Open/Shut Throttling Modulating Control
	Where Installed? Buried Submerged Above Ground, In Plant
	Line Fluid? Fresh Water Sewage Air Other?
	Maximum Fluid Temperature?°C°F
	Line Size?inches(mm) (nominal)
6.	Normal Working Pressure?psikPa Maximum (Shutoff) Pressure Differential?psikPa
7.	Normal Wide Open Valve Flow?flow rate orflow units
8.	Emergency Maximum (Line Break, Etc.) Flow?flow rateflow units
9.	(If Throttling or Modulating Control) Flow Range Desired? Maximum Flow?flow rateflow units Minimum Flow?flow rateflow units
10.	Pipe Connection?FlangedMechanical JointOther
1. 2.	Operator Type? Manual: Lever Lead Screw Gear Other? Power: Cylinder Electric Other? Direction of Rotation To Open: Clockwise–(OR) Counter clockwise–(OL) Cylinder Counter clockwise–(OL)
3.	Cylinder Specifications: a. Supply Type and Pressure? WaterpsikPa
	b. Fail Safe? □Yes □No; If yes which way if valve fails? □Open □Close
	c. Operating Times?sec Open to Close;sec Close to Open
	d. Accessories?
4.	Electric Specifications: a. Supply?VoltsPhaseHz b. Duty Cycle? Intermittent IContinuous c. Starter/Control Needs? d. Operating Times?sec (Note: 60 sec per AWWA unless specified)
	e. Accessories? AUX Switches Potentiometer Slidewire Receiver Reversing Starter Heaters Control Station Control Transformer Other?
